

# Sprint 2 Deliverables

AVATR

# Reiterate Sprint 1 deliverables based on feedback

- Web-based
  - Don't type long file names
  - Demo this at the end of the sprint
- 
- Goal is to make it usable by neuroscientists
  - Our documentation is too long right now
    - They have to do too much

# LIMS system

- The boss has data storage of images handled
  - Clunky with anything else
- We need something to store data analysis logs + metadata
  - + derivatives of the data
- Have its own set of documentation
- Demo this at the end of the sprint
  - Tie it into the demo of earlier pipeline
